ABOUT

I am a developer who learns by doing. I don't wait until I have all the answers to get started, and I'm not afraid to take on new challenges. I have a technical background in Computer Science, am currently pursuing a degree in Information Systems at UFS, and have already deployed applications to production, provided support in high-demand environments, and built my own product born from a real pain point I observed. I'm looking for a team where I can contribute meaningfully from day one and grow alongside the product.

TECHNICAL SKILLS

Frontend: React, TypeScript, JavaScript, Redux, HTML, CSS, Progressive Web App (PWA)

Backend: Java, Spring Boot, REST API, JPA, Hibernate, JUnit, TDD

Databases: PostgreSQL, MySQL, H2, Flyway

Tools & Practices: Git, GitHub, GitHub Actions, Git Flow, Conventional Commits, CI/CD, Scrum, Vercel, Postman

EXPERIENCE

Federal Institute of Sergipe (IFS)

February 2026 – Present

PBIEX Scholar – Institutional Technology Support

- Provided technical support in a high-demand environment, diagnosing and resolving hardware, software, and connectivity issues.
- Organized digital workflows and assisted with the issuance of institutional academic certificates.

UNIT – Tiradentes University

September 2024 – August 2025

PIBIC-EM Scholar – Full Stack Development

- Developed a clinical PWA for fall-risk assessment in elderly patients using React, TypeScript, and Redux; validated in a study with 30 participants and published to production via Vercel.
- Achieved an ICC of 0.975 on the overall risk index (IGRQ), classified as excellent, with no statistically significant differences between the app and the traditional manual method ($p > 0.05$).
- Implemented offline support via Service Worker, enabling use in environments without connectivity such as basic health units and home visits.
- Automated risk index calculation and medication database lookup, eliminating manual tabulation and reducing the risk of human error in clinical diagnosis.

PROJECTS

Aluggy – Housing Platform for University Students

2025 – In Development

Full Stack Developer | React, TypeScript, Java, Spring Boot, PostgreSQL

- Developing a web platform that connects UFS students with properties and shared housing near the university, addressing the lack of a specialized channel for this niche.
- Allows landlords and students seeking roommates to advertise directly to the right audience, reducing costs and time spent searching.
- Building the backend with Java, Spring Boot, PostgreSQL, and Flyway for database migration management.
- CI pipeline configured with GitHub Actions for automatic test execution on every pull request.

REST API – Order Management & E-commerce System

January 2026

Backend Developer | Java, Spring Boot, JPA, Hibernate, JUnit

- Built a complete REST API with CRUD endpoints, exception handling, and data validation.
- Structured layered architecture (Controller, Service, Repository) following separation-of-concerns principles.
- Implemented automated tests with JUnit integrated with an in-memory H2 database.

EDUCATION

Bachelor's Degree in Information Systems | Federal University of Sergipe (UFS) | May 2025 – December 2028 (in progress)

Technical Diploma in Computer Maintenance and Support | Federal Institute of Sergipe (IFS) | Completed

Languages: Portuguese (Native), English (B2)
